

Collection no. 117

Kosciusko Massif

Key & Lake

27-28. I. 1962

Mt. Gungahlan & White's River hut. -

White's R. hut is at c. 5500ft, while
Monistria *vinosa* *coarctata*, *Monistria* (*Uplama*) *sp.*
Gungahlan rises to 6779ft. At the hut, & up
Kosciuscola *usitatus*, *Percassora* *rugifrons*
the slope to within c. 400ft of the
summit, the Uplama & Monistria
vinosa were found together on the
shrubs. M. vinosa extended almost
to the summit, but the difference was
possibly not significant. Both species
were noted on the following shrubs:
(det. by P.S. Lake)
Prostanthera cuneata, Novae "longifolia",
Olearia floribunda; M. vinosa in addition
on Helichrysum secundiflorum, & Uplama
in addition on Orites lanceifolia. Again
the difference is probably not significant.
No obvious differences in distribution
or behaviour were noted. In spite of
searching at many points on the
Massif to the east of the Divide by

P.S. Lake during ensuing weeks. Yellama
 was found nowhere else. At Gungahlan
 it was abundant, being especially
 associated, perhaps, with the Prostanthera.

76976 ^{Tetrix sp.} Eucalyptus pauciflora, E. perminiana.

76978 ^{Morinda laevis (L.)} Bridge over Dicky Cooper Creek,
 near Gechi R. junction.
